<div align="center">Final Project</div>

The project was based off the scoreboard downtown Pittsburgh PA where the Pittsburgh penguins play. The project would show how the scoreboard at the arena would display the stats to the viewing fans.

https://github.com/RyanKopach/Final-scoreboard

```
Alice3 Plugin  ×    ScoreBoard (run)  ×

  run:
  Team Name: Penguins        Team Name: Away
      Score: 3                   Score: 0
                    Time: 20
              Period : 1
  BUILD SUCCESSFUL (total time: 0 seconds)
```

One thing I wish I could have added was the ability to add pantiles to the home and away team. Some components could be better as in the home and away team inputs because at time it's not only the penguins playing at the rink.
